

With the combined experience of over 27 years in the collection software industry, you can trust that Colipso® will handle your specific collection needs.

General Information

Colipso's cutting-edge functionality and web-based interface means users can access the most current debt-related data in real-time. You can now manage all aspects of your daily activities more productively - translating into faster turn-around and improving your bottom line.

Colipso is the next generation of debt collection software. Built on the Microsoft.NET platform, Colipso provides enhanced functionality and through its use of the XML Internet protocol, allows users full integration to complementary applications as well as to legacy systems and data.

Users seamlessly share information and have access to the most current debt-related data in real-time - resulting in better and faster decision making.

Ease of Use

Colipso is intuitive to learn and use - its user interface is familiar to users of Microsoft Windows and Internet browser software. Users can access data on legacy systems and fashion unique applications specific to their needs. Seamless integration with a wide variety of 3rd party complementary applications extends the usability and value of the software.

Users seamlessly share information and have access to the most current debt-related data in real-time

Flexible database structure accommodates relational database vendor technologies. Bindings for Microsoft's SQL Server is available. Colipso offers the most comprehensive debt collection functionality coupled with seamless access to real-time data so that outstanding debts can be managed and collected faster and more efficiently. **CONTINUED**

Now you can access, share and manage all collection information and tasks from
anywhere.

Your desktop can be located in your office, in the courtroom, or on the other side of the world.

Colipso Architecture

Colipso is a true Service Oriented Architecture (SOA) that benefits from and utilizes SOAP web services as its primary means of interfacing with external systems. The system was developed using the Microsoft .NET framework and uses a sequel data base and the sequel reporting system. This system can be used as a Software as a Service (SaaS) or installed on your own server and the software would run as a service from your office.

The Colipso multi-layered, object-oriented application architecture clearly delineates and decouples the service integration, business, and data access layers of the middleware. The layered approach makes for a more scalable and maintainable enterprise application. It allows each layer to focus on a specific role, and in most cases, provides the flexibility to override (or plug in) alternative implementations without imposing any changes on the upstream or downstream components.

All you need is a browser application to access your collections system and data. Your desktop can be located in your office, in the courtroom, or on the other side of the world. You can house your programs and data on-site or access both via an outsourced, SaaS (Software as a Service) solution hosted over the Internet at Hubbard Systems' data center. Your information is secure through the use of advanced encryption techniques, password protected access and other security measures.

Drop down menus, context sensitive help and familiar screen designs make the software easy to learn and use. You'll be productive from day one. Colipso offers the flexibility of tab and type or point and click - your choice.

Open architecture lends itself to close integration with other collection-related applications. Nearly seamless interfaces to a number of best-of-breed, complementary collections applications such as Innovative Billing Solutions, Banko, Accurint, E-Filing, TouchStar Software and Global Connect streamline collections activi-

Colipso's highly scalable design makes it a cost effective choice for organizations of all sizes.

ties and enhance collections productivity. Skip tracing, people locating, bankruptcy searches and letter outsourcing can all be accessed through Colipso.

Colipso is a Collections System Designed to Fit Your Needs. An open-ended, relational database structure allows users to access and use their data. Colipso's highly scalable design makes it a cost effective choice for organizations of all sizes. Full integration opportunities with other applications facilitate data and file sharing both with internal systems and outside parties.

Colipso's feature-rich functionality meets every aspect of collection case management. The software addresses the numerous components of debt collection including:

- Debtor File Management
- Consumer & Commercial Collections
- Rich Accounting Features
- Complete remittance to handle any request
- Detailed and Flexible Cost Reporting with Crystal Reports
- Medical Collections
- Workflow Management/Prioritized Queues
- Subrogation
- Flexible/User Defined Reporting
- Purchased Debt
- Security
- Debt Forwarding and much more

Corporate Partnerships and Memberships

Partnerships with Microsoft, LexisNexis and a constantly growing number of relationships with best-of-breed third party businesses and forwarders ensure that your user experience grows with your company.

Memberships and attendance at annual events such as The National Association of Retail Collection Attorneys (NARCA) and Debt-Buyers Association (DBA) keep us in constant contact with industry leaders and best-of-breed vendors. Your relationship with us continues long after the point of sale.

Company Culture and Focus

Colipso, Inc. is a diverse and growing team of talented people dedicated to providing unconditional service to its customers. Our company has a culture of collaborative innovation and focus. We are encouraged to have an opened dialogue in a non-layered professional environment - giving us the freedom to effectively manage our jobs.

We are focused on how new technology can best be used to make all collections easier, faster and more profitable for our users. Our products span not only the niches within the legal collections industries but the collection agency and financial industries as well. With development teams in the United States and India, Colipso, Inc. continues to leverage global development.
