

# Colipso System

## MINIMUM SPECIFICATIONS

### Server(s)/Hardware

- We recommend a dedicated server for the web and application components and a second server for the database as a minimum with a test environment.
- Processor: 3.0 Gigahertz (GHz) multi-core
- Memory: 4 Gigabyte (GB) of RAM on the web/app server, 8 GB RAM on the SQL server
- Drives: 500 Gigabytes (GB) 15k RAID5 hard drive array and a CD/DVD-ROM drive
- Some Colipso® clients (with larger databases due to a large number of claims and/or a long period of history to maintain) will require separate web and application servers.
- System performance will be a function of case volume and workload unique to every client, additional hardware may be required for optimum efficiency and should be upgraded at least every 36 months.

### Server Software

- Operating System: Microsoft® Windows 2003/2008 Server 64-bit or 2005/2008 64-bit
- Microsoft SQL Server 2005 64-bit or SQL Server 2008 64-bit
- IIS 6.0 / IIS 7.0
- Microsoft .Net 3.5 Framework
- Backup software compatible with SQL Server, for Colipso DR and an on-line store as well as an off-site location

### Client Requirements

- Windows XP Professional with Service Pack 3 or Windows Vista/7
- Microsoft Internet Explorer 7 (3rd party browsers not currently supported)
- Minimum 100MB ethernet connection to LAN
- 17" monitor with minimum 1280 X 1024 pixel resolution

### Colipso Platform Information

- The server platform is Microsoft .Net and the client platform is Internet Explorer Version 7
- The continued maintenance of the hardware and software platform is required for Colipso and will permit acceptable performance and stability
